

# Water treatment equipment manufacturers

Union of water treatment  
equipment manufacturers

[www.siet-info.com](http://www.siet-info.com)

## Leading edge water treatment technologies

Siet represents **the manufacturers and service providers operating as suppliers of water treatment and analysis equipment.**

The members of Siet work in the design, manufacture, sale and maintenance of equipment used in water treatment and/or analysis, such as:

- filters: sand, diatomite, activated carbon filters...
- aerators, agitators, mixers, flocculators...
- floatation units, grease removers...
- clarifiers, lamella separators...
- chlorination, dechlorination equipment...
- ozone generators,
- ultraviolet systems,
- membrane systems for microfiltration, ultrafiltration, nanofiltration, reverse osmosis,
- ion exchangers for water softening, denitrification, decarbonation...
- water treatment product addition and dosing systems,
- equipment for on-demand or continuous water analysis.

These leading-edge technologies are used in the production of **drinking water, domestic hot water, process water** (industrial water, cooling water...), swimming **pool water**, and the treatment of **urban and industrial wastewater**.

They **protect the consumer and respect the environment**.

The water treatment equipment manufacturers constantly work to improve the technologies by investing substantial sums in research and innovation.

## Optimally suitable solutions

The water treatment equipment manufacturers propose their solutions - from the simplest to the most highly sophisticated - to customers in France and across the World:

- companies that design and build drinking water production and wastewater treatment plants,
- local governments and operators for their infrastructure maintenance,
- manufacturers and managers of swimming pools and spas,
- industrialists for the production of process water (pharmaceutical, cosmetics, agri-food business industries...) and ultra-pure water (electronic industries...),
- industrialists for the treatment of cooling water and effluents (refineries, chemical industries, thermal power plants, paper mills, hospitals and pharmaceutical industries, agri-food business industries...),
- NGOs working in Africa, Asia, South America, to supply small-scale drinking water production and analysis units...

## The SIET plays a key role for the profession by

- **Representing its members** in dealings with public and private institutions in France and Europe
- **Defending the interests of the profession** and promoting its line of work
- **Taking part in the updating** of regulations and standards with public health and environmental protection as the prime objective
- **Supporting innovation** and promoting information networking
- **Publishing technical data sheets** on topics concerning its sector

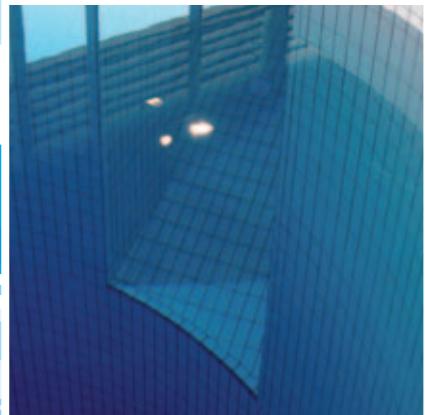

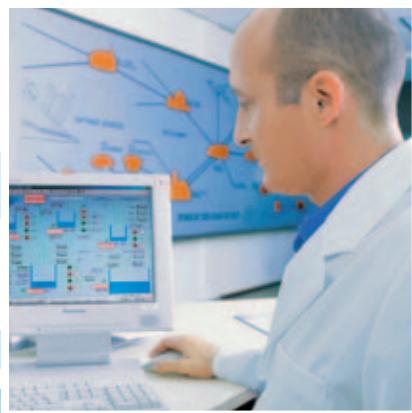

Download the data sheets: [www.siet-info.com](http://www.siet-info.com)

- **Encouraging its members to actively engage in sustainable development approach.**  
The Siet participates in the development of the Aquaplus excellence-based approach to the water sector, which rewards public and private stakeholders for their commitment to promoting sustainable development.
